Enterprise Architecture
Center of Excellence Technologies

We use a reliable, repeatable methodology and our Enterprise Architecture Center of Excellence (EACOE) certified consultants, to customize technologies that will assist your organization with collecting, managing, and implementing a complete Enterprise Architecture (EA) methodology.

To manage an Enterprise Architecture effectively requires a methodology that will equip an organization to meet demanding business challenges.

With the EACOE approach, our architects work with you to customize a technology-enabling our EA methodology and governance process across your organization's Enterprise Architecture, to create a "living" approach toward EA.

As we help you with creating governance of your EA, we keep in mind that your EA needs to be reflective of your business strategy and responsive to planned or event driven re-evaluations needed to maintain alignment, between limited resources and the changing business strategy.

We use our methodology and EACOE certified architects to customize new or existing applications implemented for collaboration and workflow automation, to ensure your business artifacts reflect your organization's business processes.

The EACOE Approach:

- Collaborative EA capability

- Workflows that facilitate the EA lifecycles

- Information systems architecture applied across the organization's EA artifacts

- EA methodologies supported by your application architecture

- EA governance incorporated into your application and information architecture implementation.

- Technology that enables the EA lifecycle

Components

Implementation Synchronization — Our EACOE custom tools are in full alignment and fully integrated with our methods, that customize technology that facilitates an organization's EA implementation across the application and information architectures.

Workflow Automation — Automate each phase of an EA lifecycle, harvesting, maintenances, modeling and archiving of EA artifacts and information.

*Governance Implementation —*Enable the governance of an organization's EA using technology ensuring continuous alignment of IT and business strategy.

All services are offered on a fixed-fee basis.
